2. Sightings data

2.1 Field work

2.1.1 Systematic

Photo-identification and biopsy sampling of Indo-Pacific bottlenose and humpback dolphins was conducted off the south coast of Zanzibar, Tanzania, January – March 2004 (SU).

3. Marking data

3.1.1 Natural marking data

Mark-recapture analyses (using the software Capture) was conducted on photo-identification data collected between 1999 – 2003 of Indo-Pacific bottlenose dolphins and humpback dolphins off the south coast of Zanzibar, Tanzania. Latest available abundance estimates from data collected in 2001: 161 (95% CI 144-177) bottlenose dolphins and 71 (95% CI 48-94) humpback dolphins.

4.2 Samples from by-catches

Swedish legislation demand that harbour porpoises bycaught or found stranded in the Baltic Sea should be retrieved and submitted to the Swedish Museum of Natural History in Stockholm whereas porpoises from other areas only need to be reported.

Bycaught and stranded cetaceans around Zanzibar, Tanzania were collected by the Institute of Marine Sciences (IMS), University of Dar es Salaam. This work is part of a collaborative project between Stockholm University and IMS and funded through the Swedish International Development Agency (Sida). The project was initiated in 1998 and is aimed at assessing the status of marine mammals in Zanzibar and Tanzania. For more information on this project contact Per Berggren.
