2. Sightings data

2.1 Field work

2.1.1 SYSTEMATIC

Photo-identification of Indo-Pacific bottlenose and humpback dolphins was conducted off the south coast of Zanzibar, Tanzania, February – April 2005 (SU).

3. Marking data

3.1 Field work

3.1.1 NATURAL MARKING DATA

Mark-recapture analyses (using the software Capture) was conducted on photo-identification data collected between 1999 – 2002 of Indo-Pacific bottlenose dolphins and humpback dolphins off the south coast of Zanzibar, Tanzania. Latest available abundance estimates based on data from 2002 for bottlenose dolphins 173 (95% CI 139-214) and based on data from 2001 for humpback dolphins 71 (95% CI 52-98).

4.2 Samples from by-catches

Bycaught cetaceans around Zanzibar, Tanzania were collected by the Institute of Marine Sciences (IMS), University of Dar es Salaam. This work is part of a collaborative project between Stockholm University and IMS and funded through the Swedish International Development Agency (Sida). The project was initiated in 1998 and is aimed at assessing the status of marine mammals in Zanzibar and Tanzania. For more information on this project contact Per Berggren.
